

- Designed and developed a comprehensive full-stack cryptocurrency portfolio tracking application using the MERN stack (MongoDB, Express.js, React, Node.js) to monitor real-time market data.
- Engineered a responsive, high-performance user interface with a modern glassmorphic aesthetic using Tailwind CSS and Framer Motion, ensuring a seamless user experience across all devices.
- Integrated real-time cryptocurrency data feeds using Socket.io and Key third-party APIs (CoinGecko), providing users with live price updates, market cap visualization, and trend analysis.
- Implemented robust security measures including JWT-based authentication, Google OAuth 2.0 integration, and Bcrypt password hashing to protect user data and portfolio privacy.
- constructed complex backend RESTful APIs to handle portfolio management operations (CRUD), watchlist functionality, and automated profit/loss calculations based on live market metrics.
- Outcome: Delivered a scalable and secure financial tool that simplifies cryptocurrency asset management, demonstrating expertise in full-stack development, state management, and real-time data integration.
